a=6
b=9
c=14
flag=1

ii). c==a+b || !flag

14 == 15 → 0

!flag → 0

none is short circuited

iii). a!=7 && flag || c>=6

a!=7 → 1

flag → 1

1

c>=6 → 1

c>=6 is short circuited so

c>=6 is not considered

iv). !(b<=12) && a%2==0

!(b<=12) → 0

0

!(b<=12) is 0 so

!(b<=12) && a%2

is short circuited and ==0 is not considered

v). !(a>5 || c<a+b)

a>5 → 1

c<a+b → 15

a>5 is true

So a>5 is short circuited and c<a+b is not considered.
